

## KITCHEN COMPOSTER

The Kitchen Composter allows 100% home composting to be achieved by tackling the elements of organic waste that cannot normally be put into a traditional home composter.

All food waste including meat, fish, dairy products and cooked foods can be turned into nutrient rich compost. This process does not produce smells or attract flies.

The Kitchen Composter is an air-tight container which the food waste is placed in. *Bokashi* is added as a compost activator. This is a bran-based material that has been prepared with EM, a mixed culture of naturally occurring friendly micro-organisms. The food waste then ferments, allowing it to be safely composted.

Liquid feed can be drained off during the fermentation process. This is alive with beneficial microbes and can be diluted as plant feed or poured down the drain to prevent algae build up and odours.

Capacity	Width	Depth	Height
18 litres	320mm	260mm	380mm
