

**COMPOST TUMBLER**

The Compost Tumbler is ideal for rapid composting, especially for large quantities of grass cuttings. It is easy to fill and even easier to empty.

Rotating the Compost Tumbler weekly aerates the mixture and allows the naturally occurring bacteria to work faster. This process reduces the composting time to as little as just 21 days.

Any liquid that is produced during the composting process can be drained off and diluted down to provide an effective fertiliser for the garden. This can be collected in the optional pouring tray.

Made from 100% recycled plastic with a zinc-coated steel frame. Guaranteed for 5 years.

Capacity (litres)	Diameter (mm)	Height (mm)
