

The Thermo King is a premium UV stabilised composter made from Thermolen, a thermally insulated material.

Thermolen is created from HDPE which is designed to give better insulating properties. The heat generated by the composting process is retained inside the bin, speeding up the breakdown of the contents.

This easy to assemble strong and sturdy composter is available in 3 sizes; 400, 600 and 900 litres. All Thermo Kings are fitted with two wide side hatches and a windproof locking lid.

Made from recycled plastic and guaranteed for five years.

Capacity (litres)	Width (mm)	Depth (mm)	Height (mm)
400	740	740	840
600	800	800	1040
900	1000	1000	1000
