

## BLIK MODULAR RECYCLING SYSTEM

The Blik Modular Recycling System is a sleek three drawer container designed for near-entry recycling or for collecting materials in communal areas.

Each Blik module has three 44 litre drawers each for a different material. By standing several modules together, a wide range of dry recyclables can be collected separately.

The Blik is fully customisable to suit individual needs and can be produced in a range of vibrant colours including WRAP colours. A range of apertures can be fitted to identify specific material streams.

Each set of three drawers is secured to the base of the unit by a plastic rod that can only be removed with a special key. Once the rod is in place, the drawers cannot be removed and the unit is locked to the base.

Each drawer can be removed individually and hung onto the side of a collection vehicle, or the whole unit can be wheeled to the kerbside reducing the lift and carry activity.

Capacity (litres)	Width (mm)	Depth (mm)	Height (mm)
132	460	420	1150
